Excerpt: . to determine the subunit arrangement of protein complexes in solution. Virus Structure A neutron diffraction study of tobacco mosaic virus has been initiated. The virus does not crystallize but can form colloidal solutions in which all the rod-shaped particles are nearly parallel. Such oriented sols have been extensively studied with x rays. The diffraction of neutrons perpendicular to the particle axis has been studied and four peaks have been recorded. These peaks, in conjunction with x-ray data, provide information about the average structure of the virus at different radii. Flax Pond, an estuary connected by a single channel to Long Island Sound. Measurements of the dissolved carbon content of waters flowing through the channel show that for much of the year the estuary removes carbon compounds from the waters of the Sound. Ecology Terrestrial ecosystems, especially the oak-pine forest of central Long Island,...
